American schools are often the victims of numbers games because its education is in the hands of politicians, the populace, and pundits. How Americans view numbers, science, and research profoundly impacts the ability of politicians to manipulate our schools from pre-K through graduate education. Even in classrooms, teachers are routinely implementing flawed assessment strategies based on misguided assumptions about numbers and commonly held statistical truths. American educators need to step out from under the restrictive mandates of politicians and their growing mania for measuring students - they need to leave the numbers games behind and take control of their profession. The Datafication of Primary and Early Years Education explores and critically analyses the growing dominance of data in schools and early childhood education settings. Recognising the shift in practice and priorities towards the production and analysis of attainment data that are compared locally, nationally and internationally, this important book explores the role and impact of digital data in the 'data-obsessed' school. Through insightful case studies the book critiques policy priorities which facilitate and demand the use of attainment data, within a neoliberal education system which is already heavily focused on assessment and accountability. Using an approach influenced by policy sociology and post-foundational frameworks, the book considers how data are productive of data-driven teacher and child subjectivities. The text explores how data have become an important part of

making teachers' work visible within systems which are both disciplinary and controlling, while often reducing the complexity of children's learning to single numbers. Key ideas covered include: The impact of data on the individual teacher and their pedagogical practice, particularly in play-based early years classrooms The problems of collecting data through assessment of young children How schools respond to increased pressure to produce the 'right' data – or how they 'play with numbers' How data affect children and teachers' identities International governance and data comparison, including international comparison of young children's attainment Private sector involvement in data processing and analysis The Datafication of Primary and Early Years Education offers a unique insight into the links between data, policy and practice and is a crucial read for all interested in the ways in which data are affecting teachers, practitioners and children.
